Collaborative Data Collection

Jacqueline DaVania¹, Kimberly A. Barchard¹, and Wind Goodfriend²

University of Nevada, Las Vegas
 Buena Vista University

Collaborative Data Collection

Advantages of Collaborative Data Collection

- Larger Samples
- Better Data

Collaborative Data Collection

- Methods of Collaborative Data Collection
 - Traditional Paper-Based Materials
 - Traditional Computer-Based Materials
 - Internet-Based Data Collection

Traditional Paper-based Materials

• Design materials in one lab

• Send materials to all data collection locations

• Send data to one location to be combined

Traditional Computer-Based Materials

• Design computer files in one lab

- Send files to all data collection locations
- All locations must have the computer program to run the study

KB1 Add "One challenge with using this type of data colleciton is that" before "all locaiton smust have the computer program..." Kim Barchard, 4/9/2008

Internet-Based Data Collection

- Two Methods of Implementing Internet-Based Data Collection
 - Programs Designed to Create Online Surveys
 - General Web Development Programs

FrontPage 2003	Microsoft	http://www.microsoft.com/frontpage/

KB2 Say "Like the previous programs, these programs are generally easy to use." Rather than saying "They work in similar ways..." say "General web development software is much more flexible than programs that were designed specifcally to create online studies. These programs can be used to create online studies, but they can also be used to create any other type of web page." Kim Barchard, 4/9/2008

Emotional Intelligence Study
Supervisor Kim Barchard
University of Nevada, Las Vegas
Purpose
The purpose of this study is to examine how different people react emotionally to a variety of situations. Different people interpret situations in different ways,
and this might be related to their personality or background. This study will examine the relationship between emotional reactions and personality.
Limitations
You must be at least 18 years old to participate in this study.
Procedures
ቭ In this study, you will complete a series of questionnaires and tests on the computer. This will take about 1 hour 30 minutes to complete. When you start this
study, you must complete the entire session before you quit.
Confidentiality
The computerized questionnaire will ask you for two types of information: your responses to the questionnaires, and identifying information so that we can
give you research credit. This identifying information will be separated from your survey responses as soon as data collection is complete, so that your survey
responses are anonymous.
All information will be kept strictly confidential. Your study results will be stored in a computer according to a randomly assigned subject code that in no way
identifies you as an individual.
Contact
If you have any questions or desire any further information with respect to this study, you may contact Kim Barchard at barchard@unlv.nevada.edu
